

TYPE 2 DIABETES

A New Path Awaits.

The **SOTA studies** are evaluating an investigational oral tablet that may help manage your blood glucose levels.

Diet, exercise, and education are important in the management of Type 2 Diabetes (T2D), but most people also require drug therapy to manage their illness.

This investigational oral tablet when combined with diet and exercise may help manage blood glucose levels in people with T2D. Additionally, this study will evaluate bone health and body composition, and the knowledge gained from this study may help other people with T2D in the future.

You may be eligible to participate in the SOTA-BONE study if you:

- » Are diagnosed with Type 2 Diabetes
- » Are 55 years of age or older
- » Have HbA1c levels between 7-11%
- » Have been on a stable dose of medication for at least 12 weeks **OR** manage your diabetes with no medication
